Certificate Details

Scrum Product Owner Training

[Score: 99]

Course Details

Are you curious about modern product development and ownership management practices? Then this course is for you. We guide you to extensively master the techniques required as a product owner to manage product backlog efficiently using Scrum. We enable aspiring product owners to develop their knowledge of maintaining and managing a responsive product backlog. We outline a product vision representing the stakeholders' and customers' requirements. The exciting part about the Scrum approach is that it is not only a framework for technology: you can apply it to all areas of life. We introduce six key Scrum principles, their importance and five critical aspects of any project. You will discover the processes revealed within the Scrum lifecycle to carry out and deliver solutions to customers effectively. Agile, a project management philosophy, indicates that you organize eighteen core Scrum processes into five groups. We identify these vital roles, especially empiricism authorities, for you as the product owner and the responsibilities of the Scrum Master and the Scrum team.
